

## INTRODUCTION

The Annual Progress Report of the SEATO Medical Research Laboratory is brought to the already overcrowded marketplace of medical literature with certain reservations. The need for a publication consisting largely of material which, hopefully, will eventually appear elsewhere in the medical literature can be seriously questioned. The diversity of the material practically guarantees that no single reader will find all the material to be of interest. Furthermore, none of the reports may be considered definitive of the authors' final analysis of the matter under study. Nevertheless, the report is offered first, as a measure of the efforts of this laboratory in study sites throughout Thailand and second, as a forum where the investigator may present, with minimal editorial restraint, data which he deems important. We trust that with this view, the reader will find that which follows interesting and informative.
